Accuracy of Prediction; Q7 Weight: 15%	Teams were required to provide a prediction for: 1) visits [HouseholdsReg], 2) pounds distributed [PoundsReg], and 3) individuals served [IndividualsReg] for each county in MN. An accuracy of prediction subscore was computed for each of the three response variables for each undergraduate team. $Root\ Mean\ Square\ Error\ (RMSE)$ was the metric used to measure prediction accuracy for each subscore. The team with the smallest $RMSE$ value for their predictions for a response received a subscore of 4 and the team with the largest $RMSE$ value received a subscore of 1. If a team did not submit a valid set of predictions for a response, the team received a subscore of 1. Linear interpolation was used to compute a subscore for the remaining undergraduate teams. The three separate subscores were then averaged to obtain an overall accuracy of prediction rubric score.							
Completeness and breadth of outcomes; Q1, Q4, and Q5 Weight: 25%	The outcomes were insightful, actionable, and thought provoking; A thorough and complete understanding of the three food shelf metrics and their relationship with food insecurity, food prices, SNAP enrollments, and other relevant factors was provided.		The outcomes were somewhat insightful and actionable; An understanding of the three food shelf metrics and their relationship with food insecurity, food prices, and SNAP enrollments was provided; but, there were some minor gaps or missing details.		The outcomes provided limited insight or may not be actionable; a basic understanding of the three food shelf metrics and their relationship with food insecurity, food prices, or SNAP enrollments was provided.	The outcomes provided limited insight and do not appear to be actionable; Little to no understanding of the three food shelf metrics was provided.	
Measure of Need vs Demand; Q6 Weight: 15%	A robust measure of need was developed that provides considerable insight beyond existing measures of demand; the relationship between their new measure of need and the three food shelf metrics was thoroughly investigated.		Developed a useful measure of need that provided some insight beyond existing demand measures; an investigation of its relationship with the three food shelf metrics was provided, but with some minor gaps or missing details.		Developed a measure of need that provided limited insight beyond existing demand measures; the investigation of its relationship with the food shelf metrics was limited.	Did not develop a meaningful measure of need; their new measure of need was comprised of existing measures of demand	
Appropriateness of analytical methods used Weight: 20%	Demonstrates an advanced understanding of the analytical methods used; methods were appropriate and correctly applied.		Demonstrates a solid understanding of the analytical methods used, but some explanations may lack depth or clarity; methods were appropriate and correctly applied.		Demonstrates a basic understanding of the analytical methods used; some methods were incorrectly applied.	The analytical methods used are not appropriate; methods were incorrectly applied.	

DRAFT

DIVISION: UNDERGRADUATE

Use of additional data sources Weight: 10%	Thoughtful selection and effective use of additional data sources; all data sources were properly cited.	Additional data sources were used, but with limited effectiveness; minor omissions in citing additional data sources.	Limited use of additional data sources; additional data sources were not properly cited.	No additional data sources were used	
Creativity & Innovation Weight: 10%	Creative/original methods were used in the analysis and discussion of results; Outcomes provide substantial value to the client and are unique, offering the client novel solutions.	Creative/original methods were used in the analysis and discussion of results; Outcomes offer some value, but they are not necessarily unique or novel.	Limited creativity/originality was used in the analysis and discussion of results; Outcomes are conventional and provide little value to the client.	The analysis and discussion of results were not creative, original, nor innovative; Outcomes are conventional and fail to provide valuable insights.	
Communication of Outcomes / Team Synergy Weight: 5%	The methods used and the discussion of outcomes were conveyed in a detailed manner that is easily understood; All team members were engaging and provided thoughtful insight into the work.	The methods used and discussion of outcomes are conveyed in a manner that is ultimately understood; Most team members were engaging and provided insight into the work.	The description of methods used, or the discussion of outcomes are sometimes incomplete or difficult to understand; Only some of the team members were engaging and provided insight into the work.	The description of methods used, or the discussion of outcomes were consistently difficult to follow and understand; Only one team member was engaging and provided insight into the work.
